

# Sovereign Internet & Laptop Protocol (SILP)

Command Center Unlock • Local Admin • No Cloud Lock■in

## IPFS Anchor (Permanent Record)

**URL:** <https://bafybeih3jwaar2dgfzndzavnobifbml7ykyrl6472cord7wzv4g56br2qa.ipfs.w3s.link/>

**CID:** bafybeih3jwaar2dgfzndzavnobifbml7ykyrl6472cord7wzv4g56br2qa

## 1) Purpose

Unlock this brand■new laptop as my sovereign command center. Provide full offline LOCAL ADMIN access without any Microsoft account, email verification, or cloud dependency. No user data exists yet.

## 2) Device Directives (Technician Must Do)

- Create a **LOCAL ADMIN** account (offline). Suggested name: **Sovereign** (or my specified choice).
- Do **NOT** tie the device to any Microsoft/Outlook account. No mandatory online sign■in.
- If Windows insists on online sign■in, use audited offline bypass (OOBE network skip or Shift+F10 → OOBE/BYPASSNRO).
- Disable device encryption tied to cloud identities. Keep BitLocker recovery key handed to me in writing if enabled.
- Return the device with **admin username and password** I specify, and a local-only standard user if requested.
- Confirm the device boots to desktop without any online requirement.

## 3) Network Directives (Sovereign Internet)

- Wi■Fi/Ethernet may be configured to my **sovereign network** only (no captive portals).
- Disable auto■join to unknown/open networks and disable Wi■Fi Sense/Hotspot 2.0 subscriptions.
- Ensure a working **local firewall** with outbound prompts/logging. No remote management without my consent.
- No telemetry enablers or 'experience' packages added. Remove bloatware and OEM nags if present.

## 4) Audit Trail & Chain of Custody

- Technician records the steps taken, tools used, and settings changed (attach printout).
- Record the **Device Serial/Service Tag** and today's date in the table below.
- Take photos (optional) and upload a short summary to an IPFS note, then write its CID on this form.

Make/Model
